Verification Code (AWS SMS Developer Sandbox): 524682. This code is for software testing and should be ignored if received unexpectedly.

All 3 protocols are active

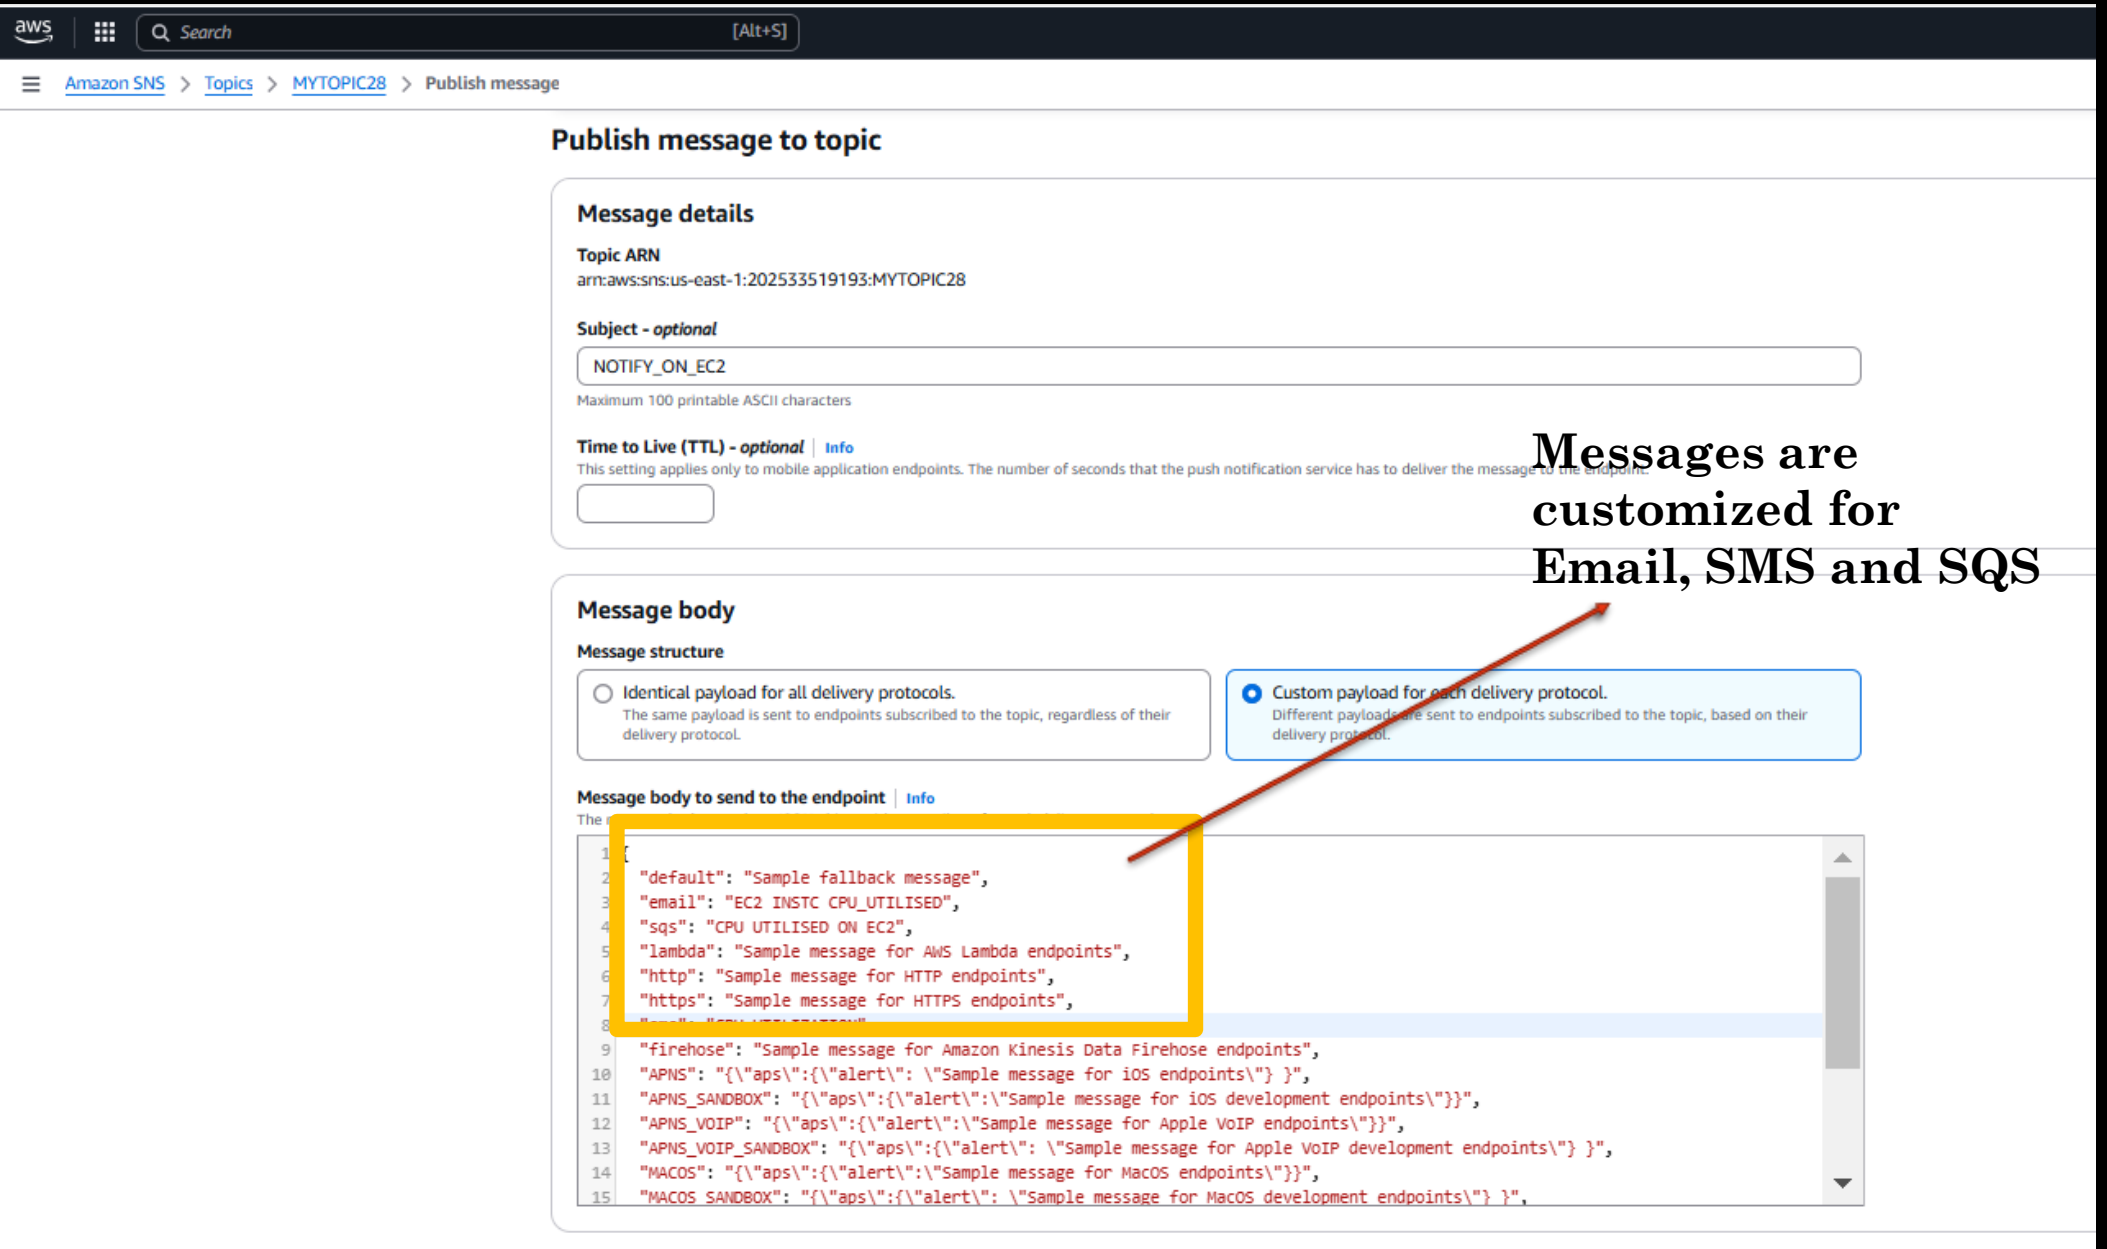

Publishing the message to subscriptions

Step 1 : Select SNS -> Topics -> MYTOPIC28(created by user)

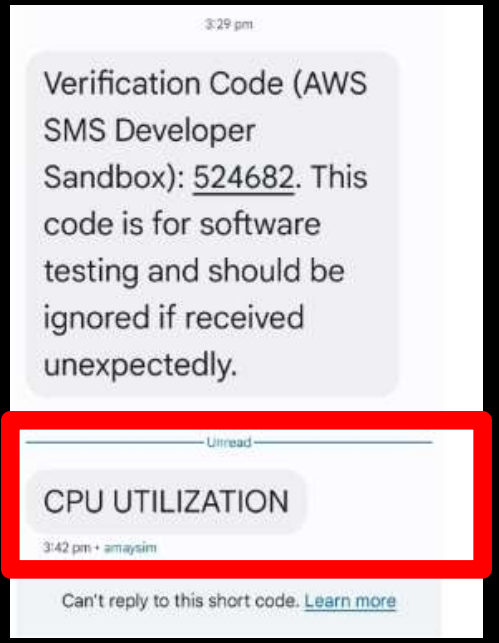

Step 2: Click on publish message

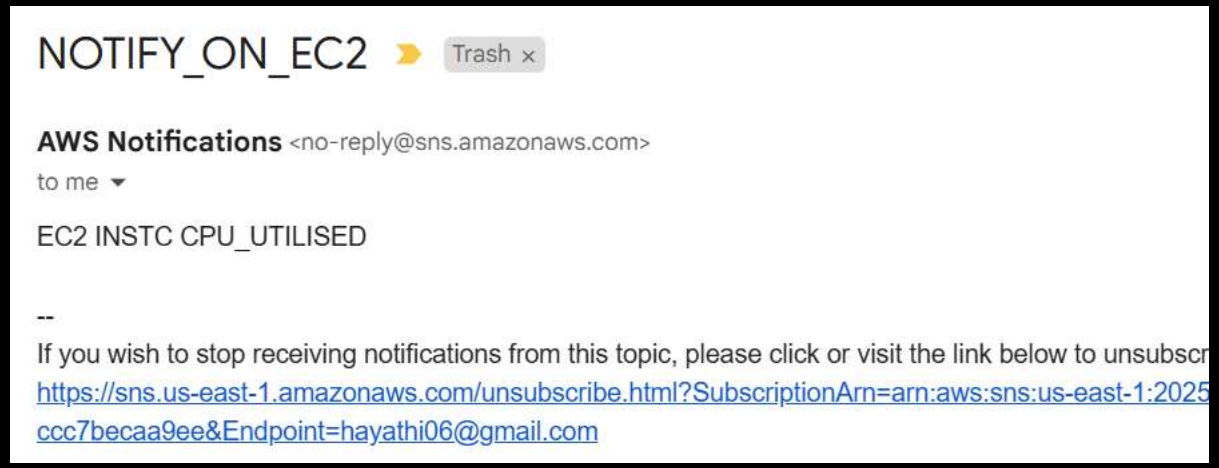

Publishing the message in message body

Messages are customized for Email, SMS and SQS

Messages are published successfully and received through SMS,SQS and Email.

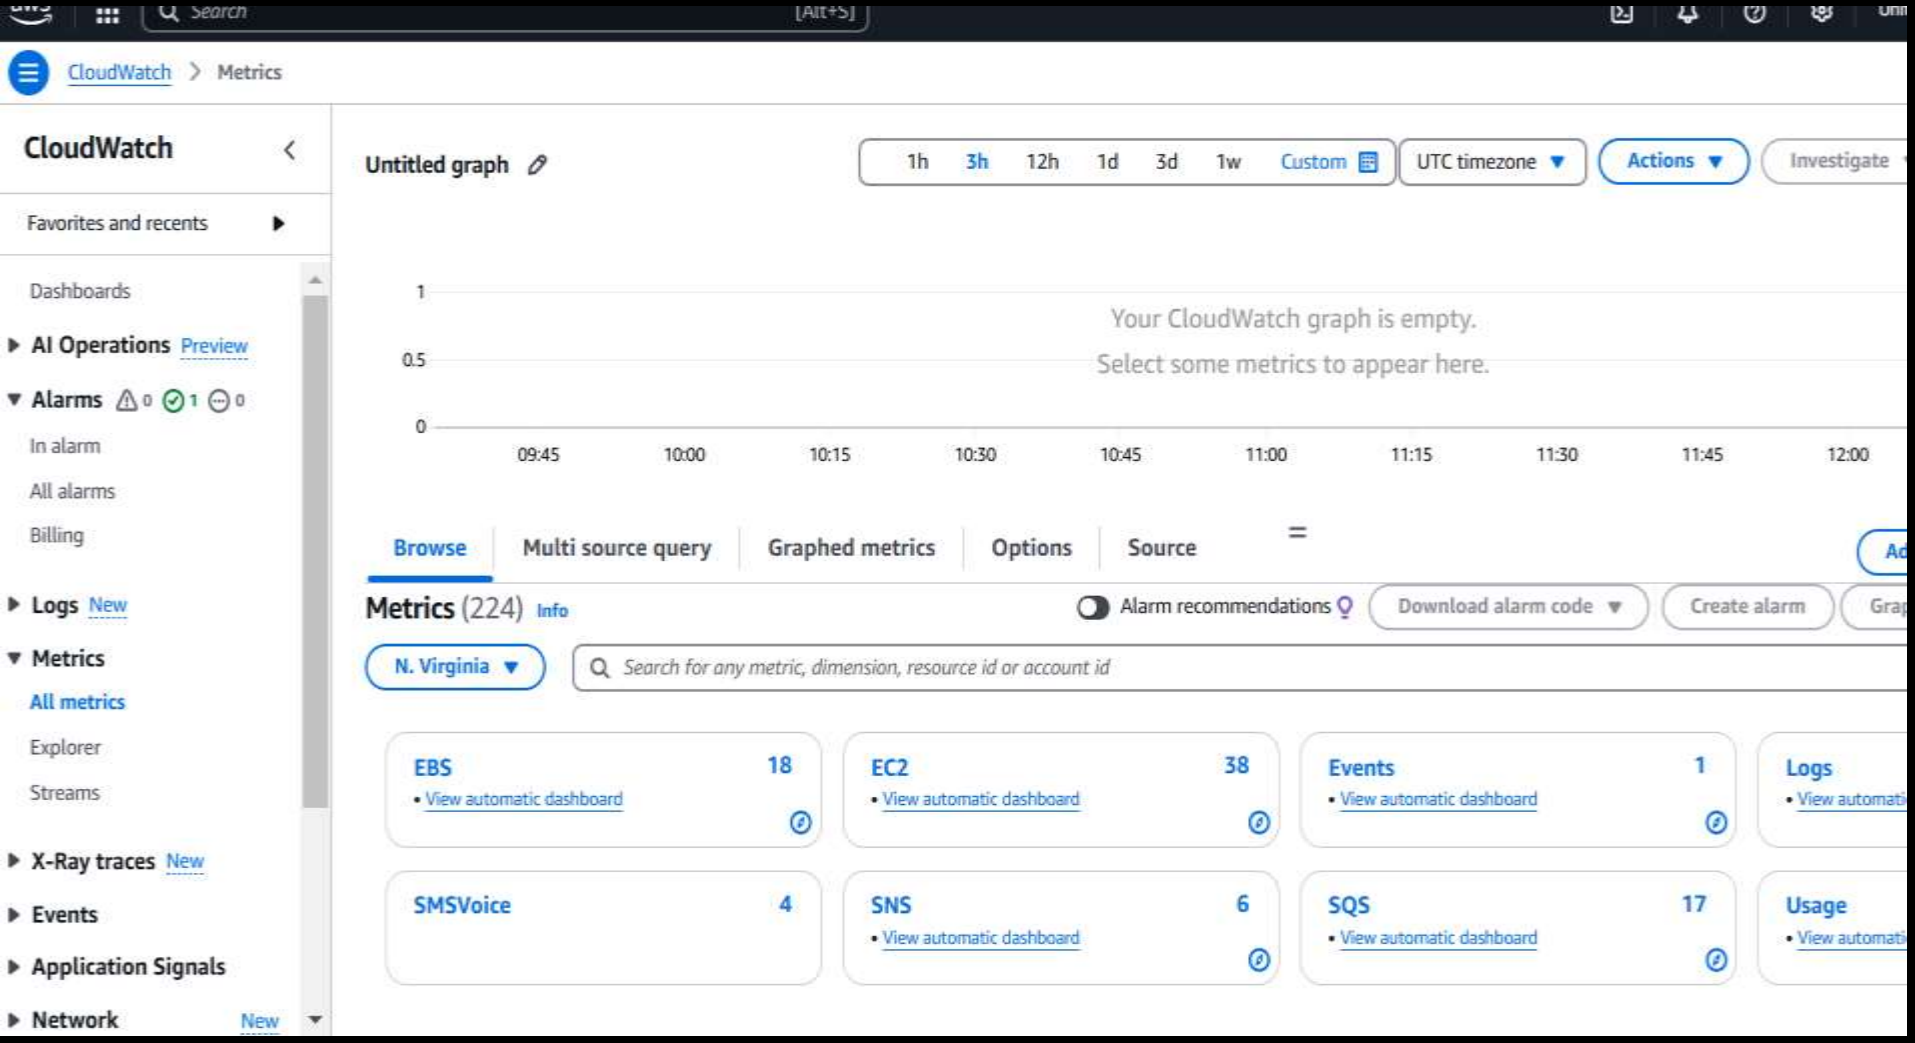

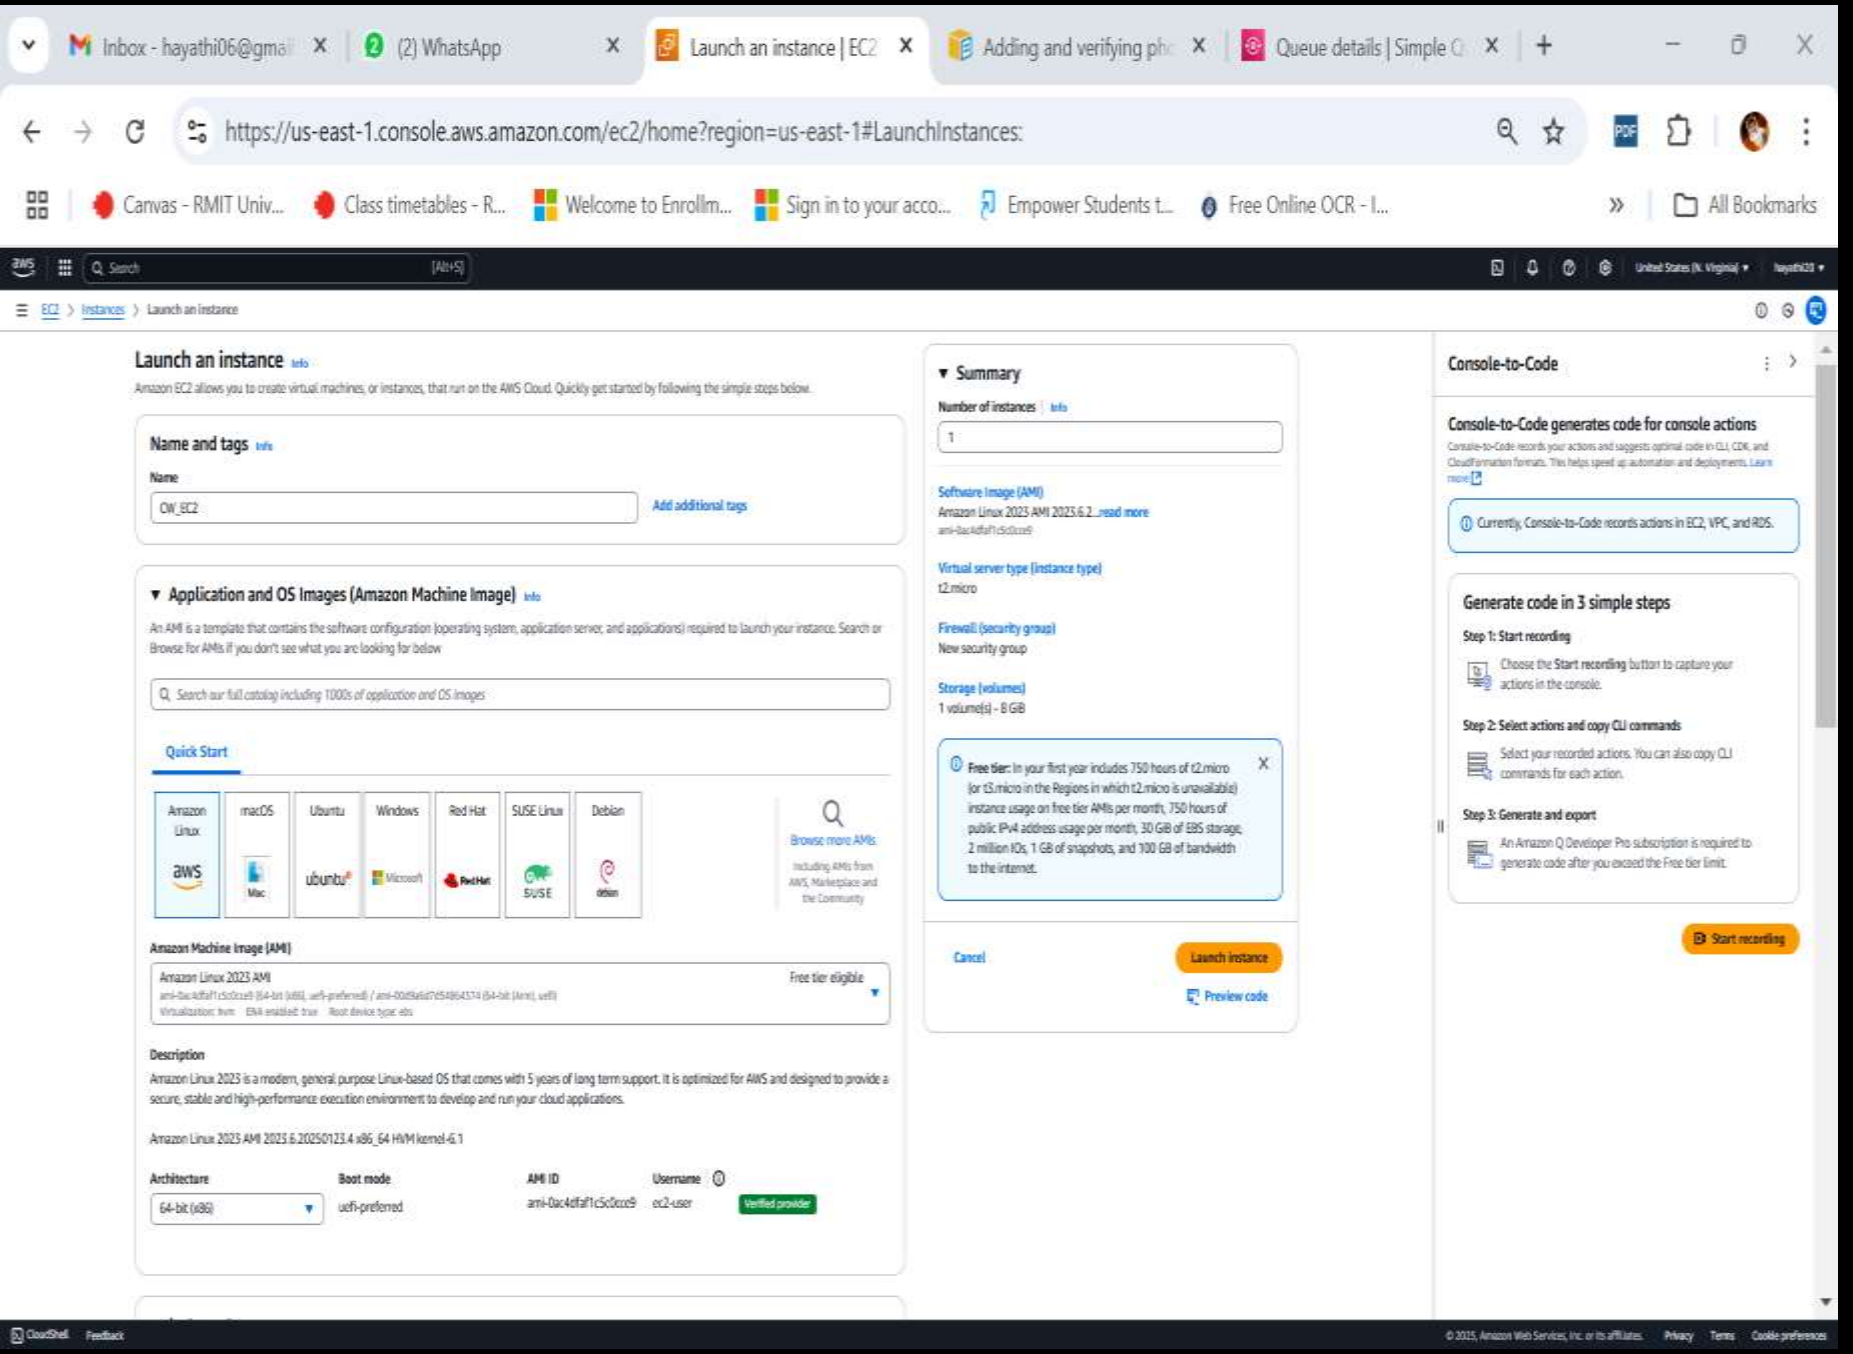

Click on Poll for message to view messages in SQS.

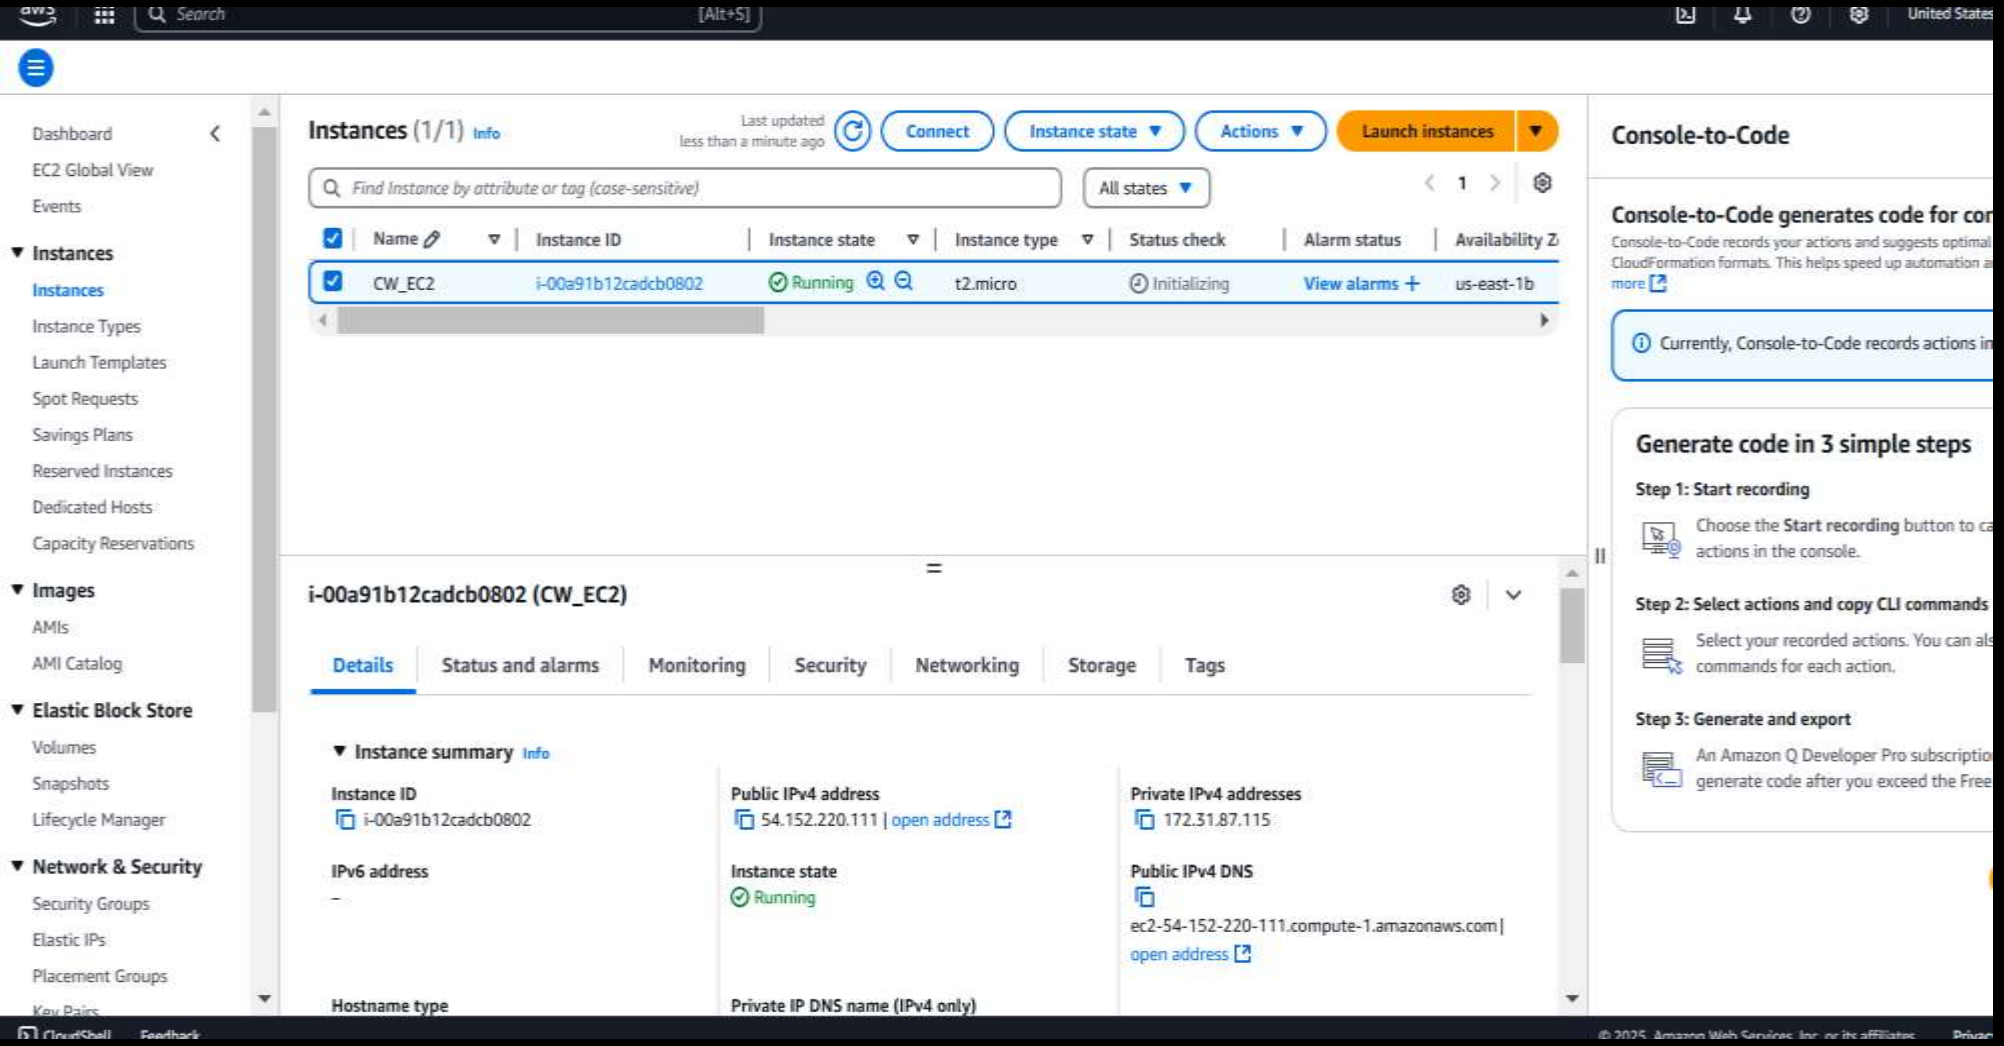

CLOUD WATCH

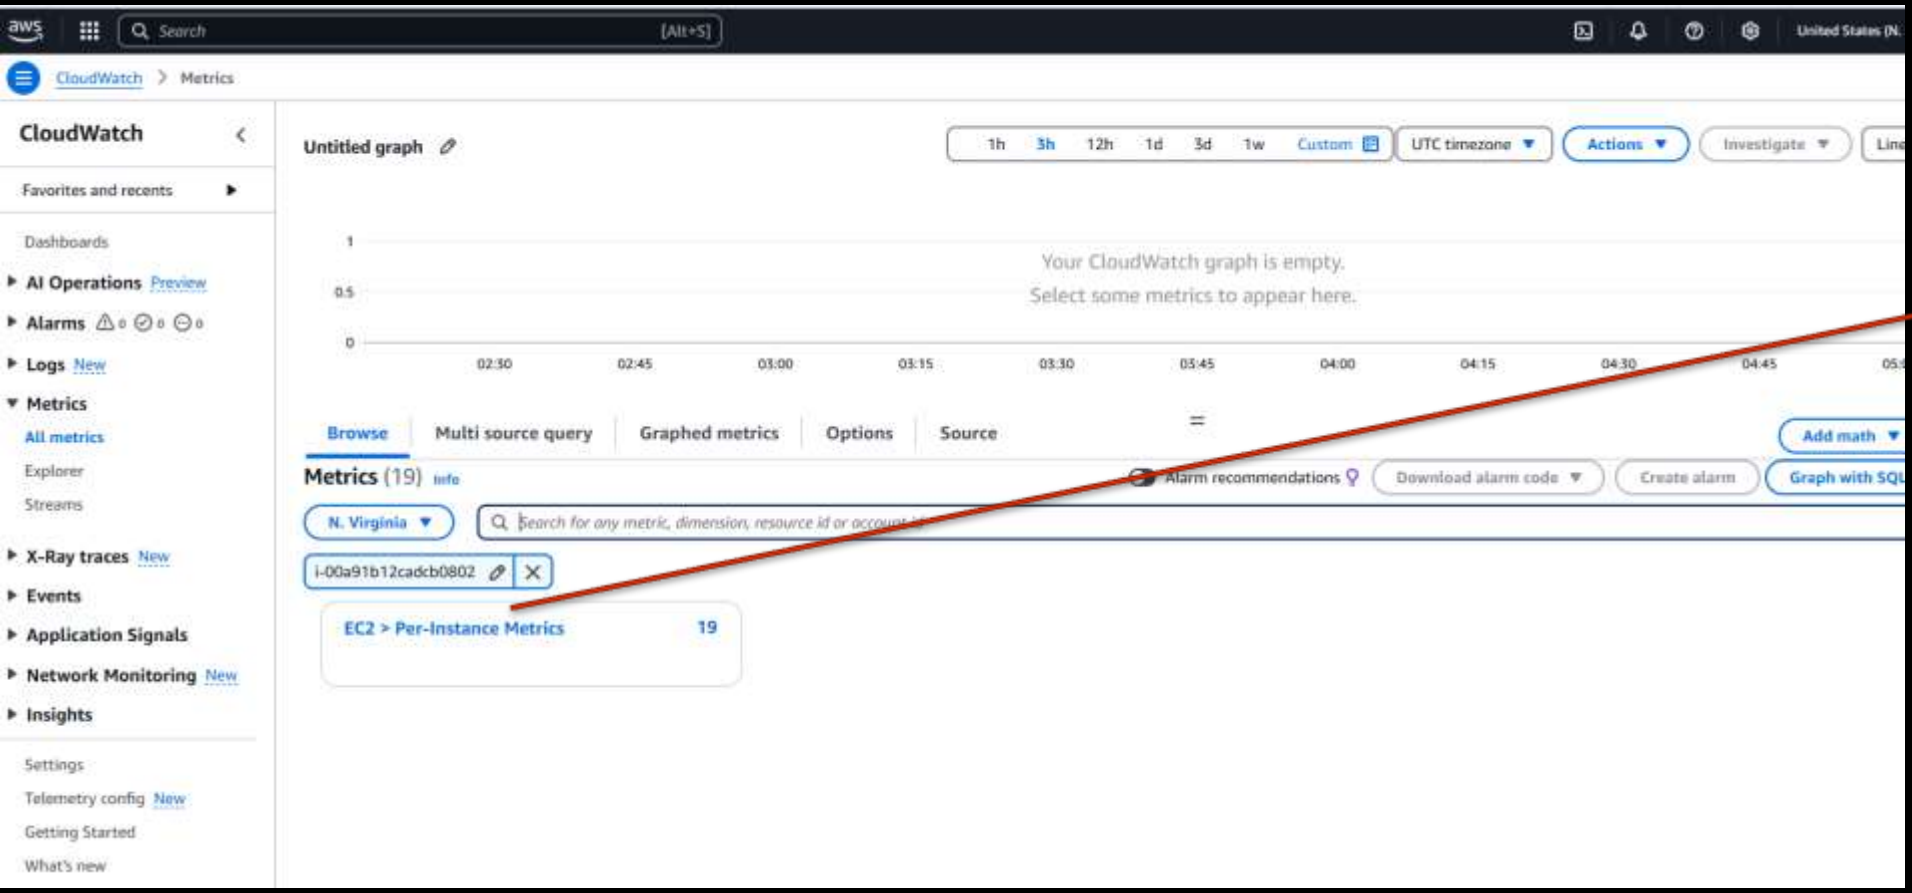

Select Cloudwatch ->Metrices
-> All metrices

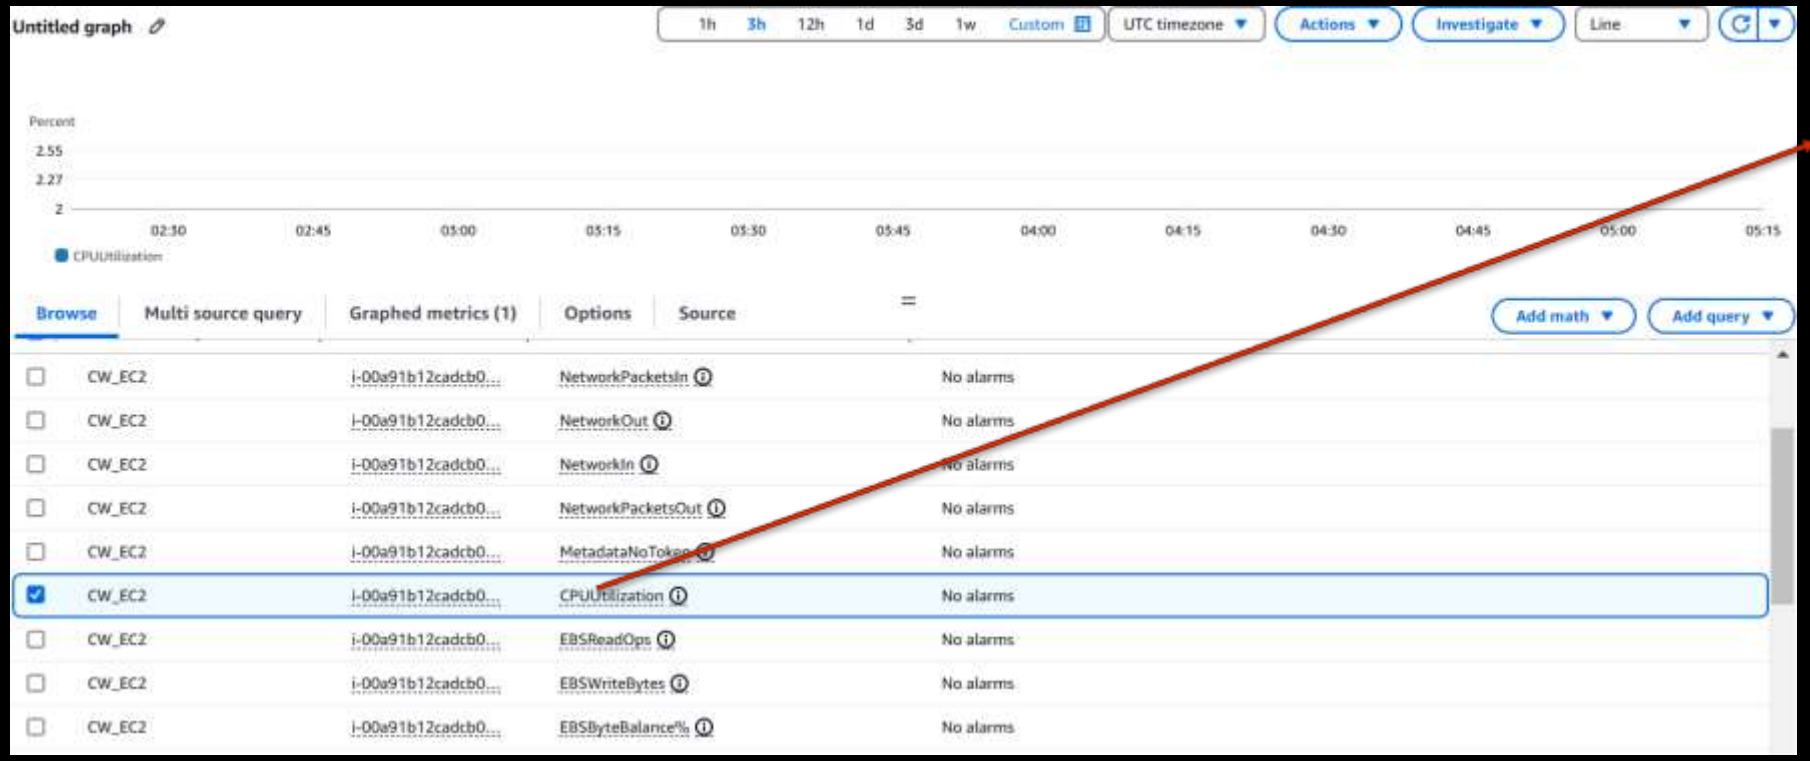

Step 2: Launch an Instance EC2 and named as **CW_EC2**

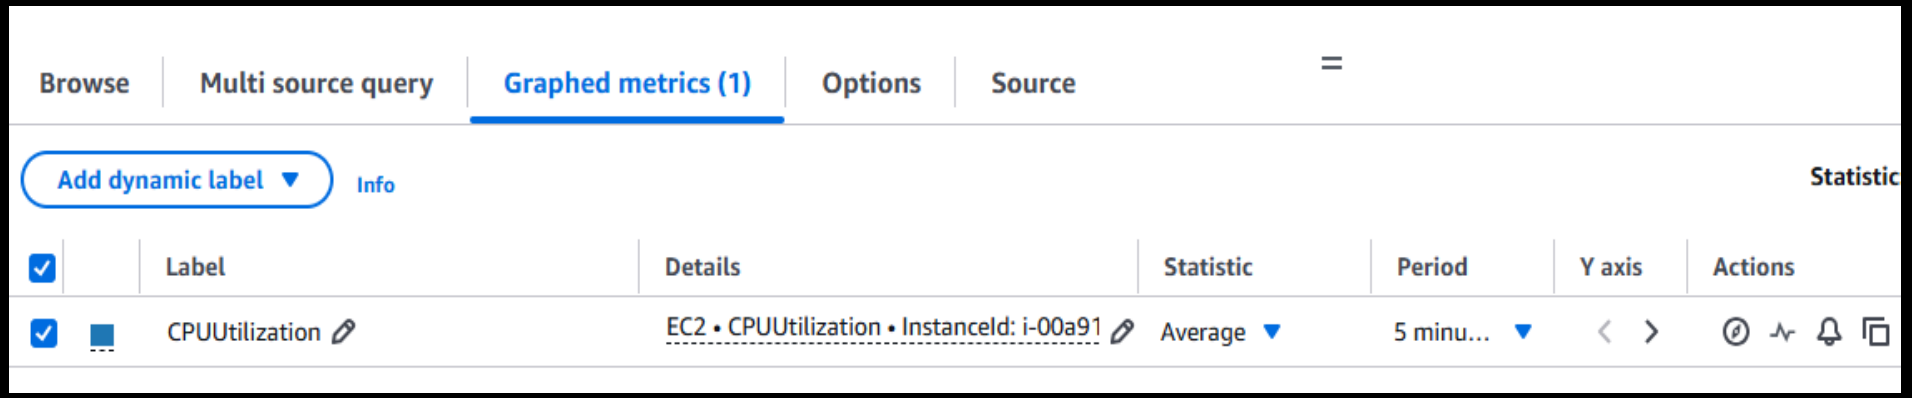

Step 3: Successfully launcehed an Instance and waiting for status check.

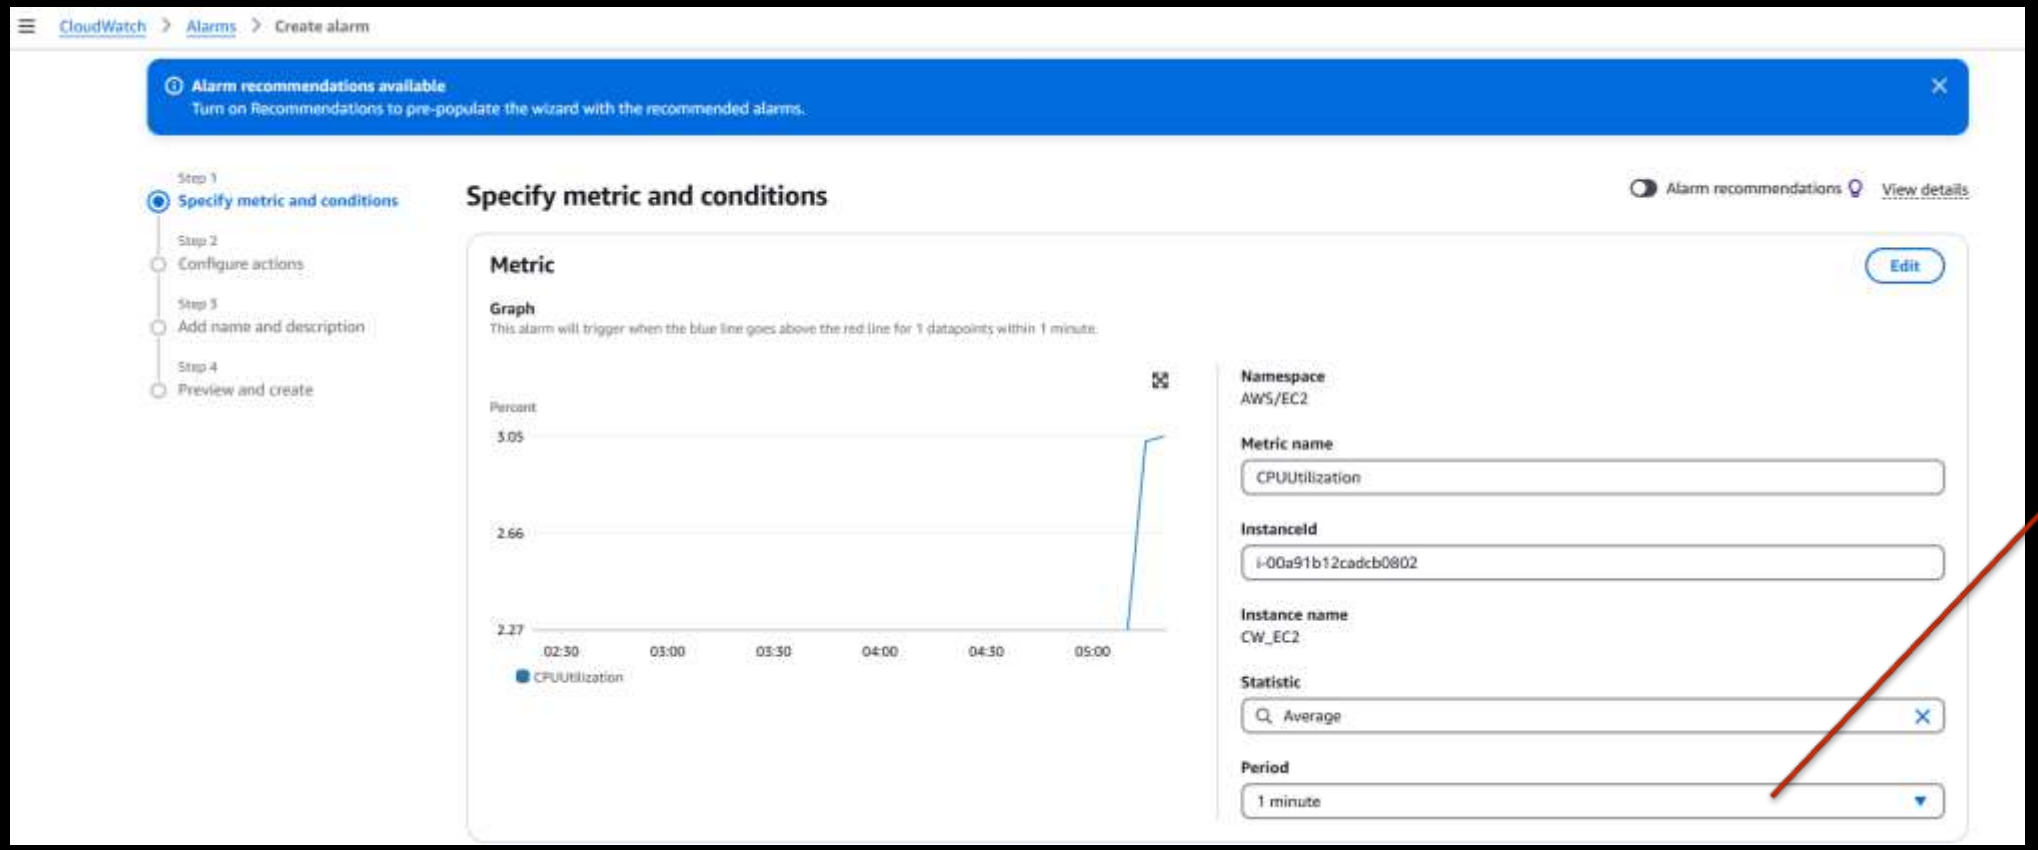

Step 4: Copy and paste instance ID and can view available metrices.

Step 5: Search for CPU utilization and select CW_EC2 CPU utilization.

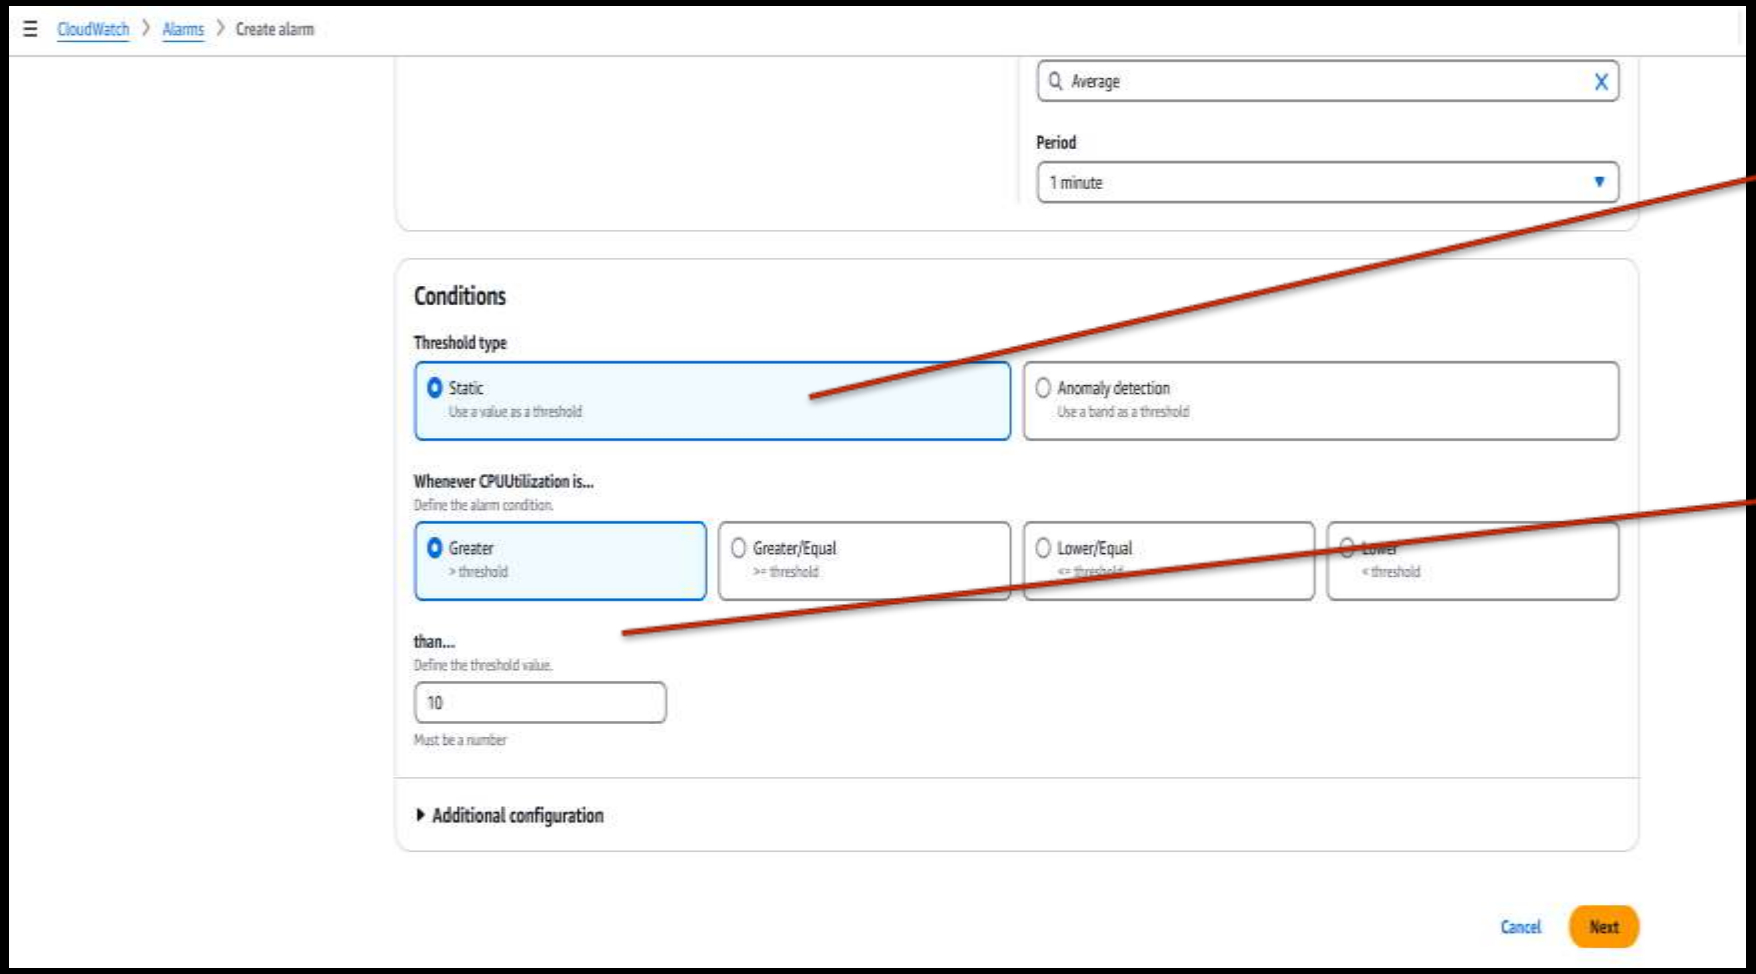

Step 6: Click on **Alarm** icon to create an alarm.

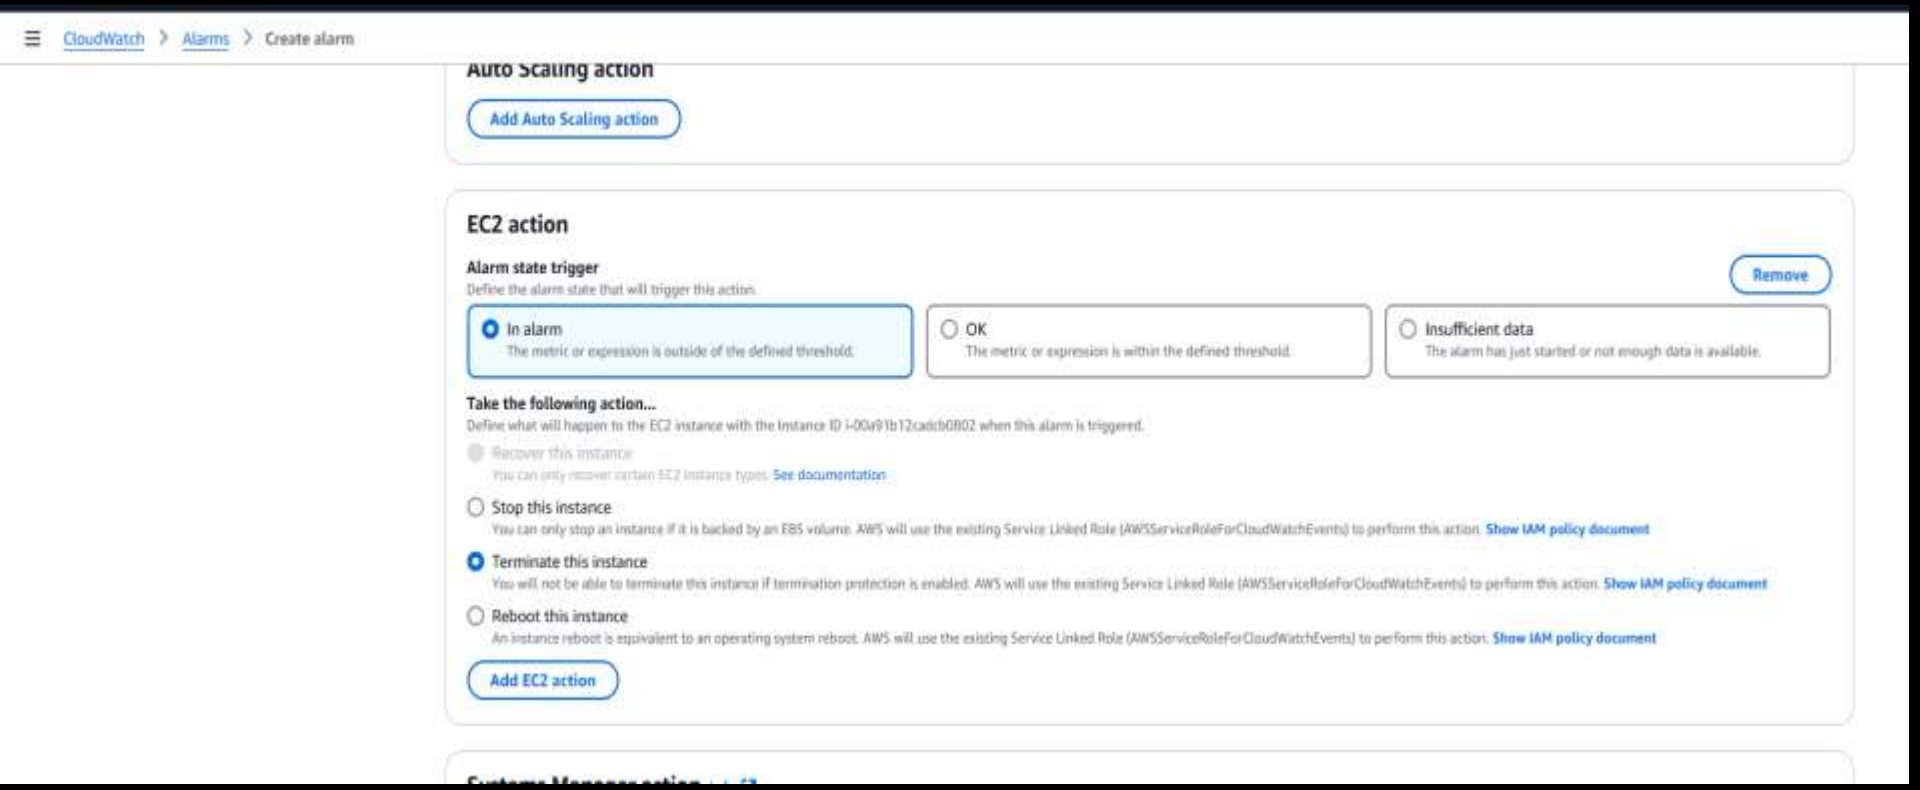

Step 7 : Specify metric and conditions

Step 8: Change period to 1 minute.

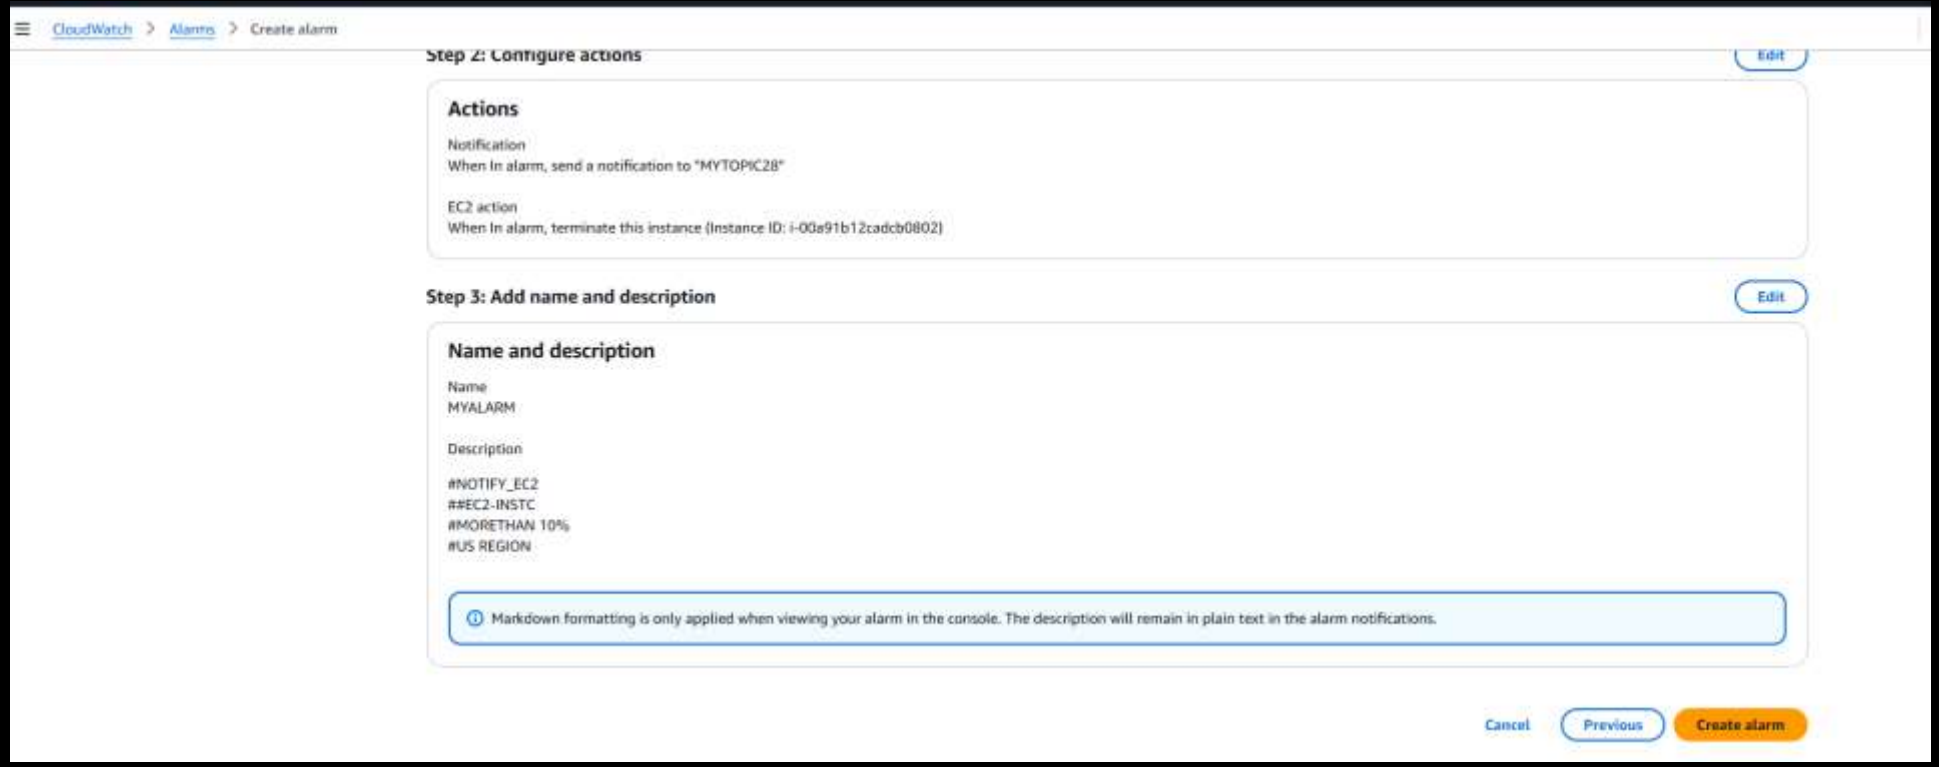

Step 9 : Specify metric and conditions. Select static in Threshold type

Step 10: Condition for CPU utilization is **greater than > 10** and click on next.

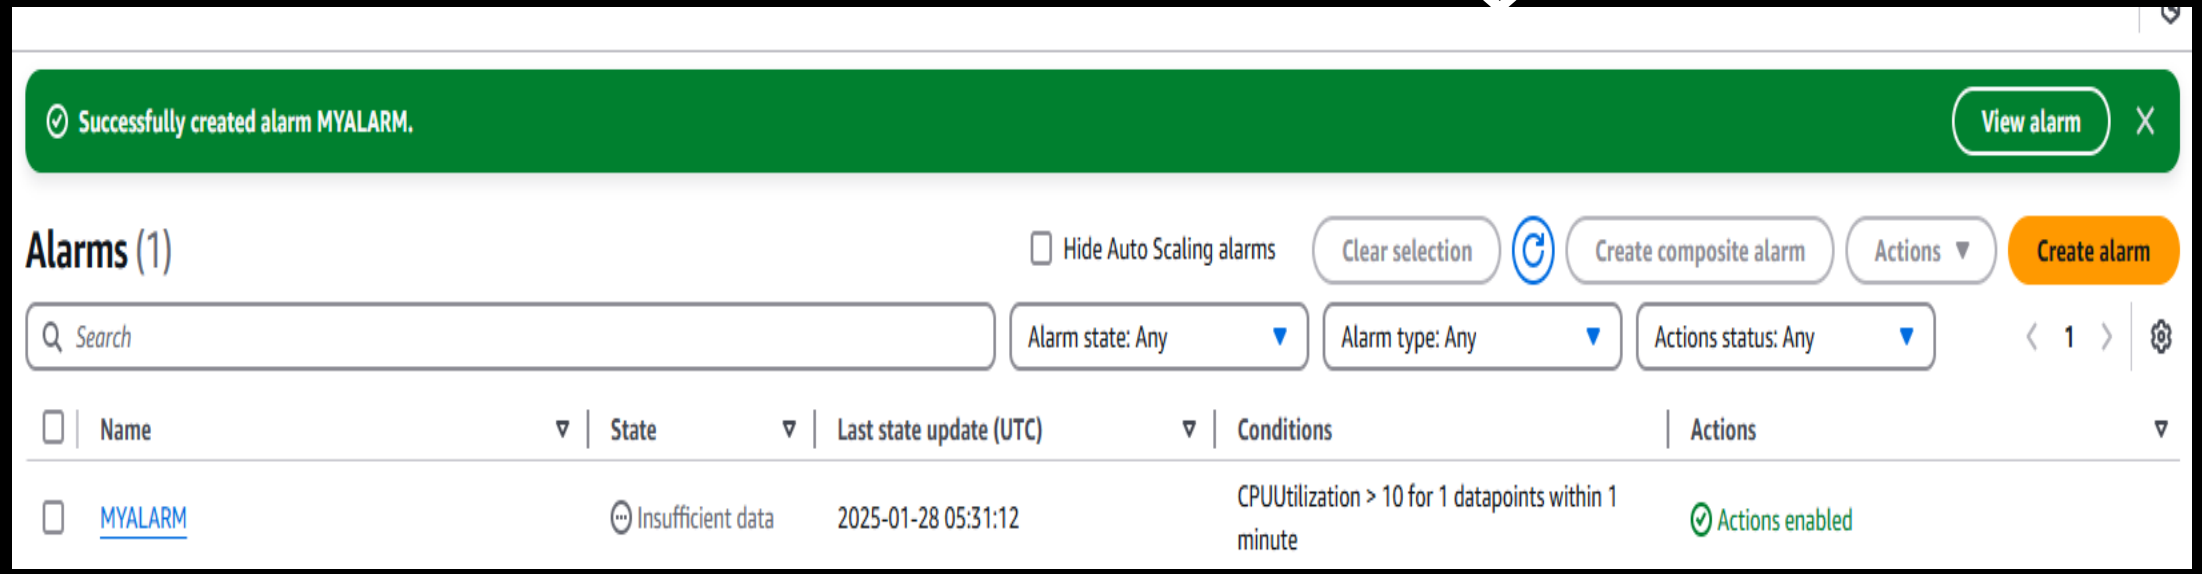

Step 11 : In EC2 action select alarm state trigger -> **In alarm**

Step 12: Select the action as **Terminate** this instance

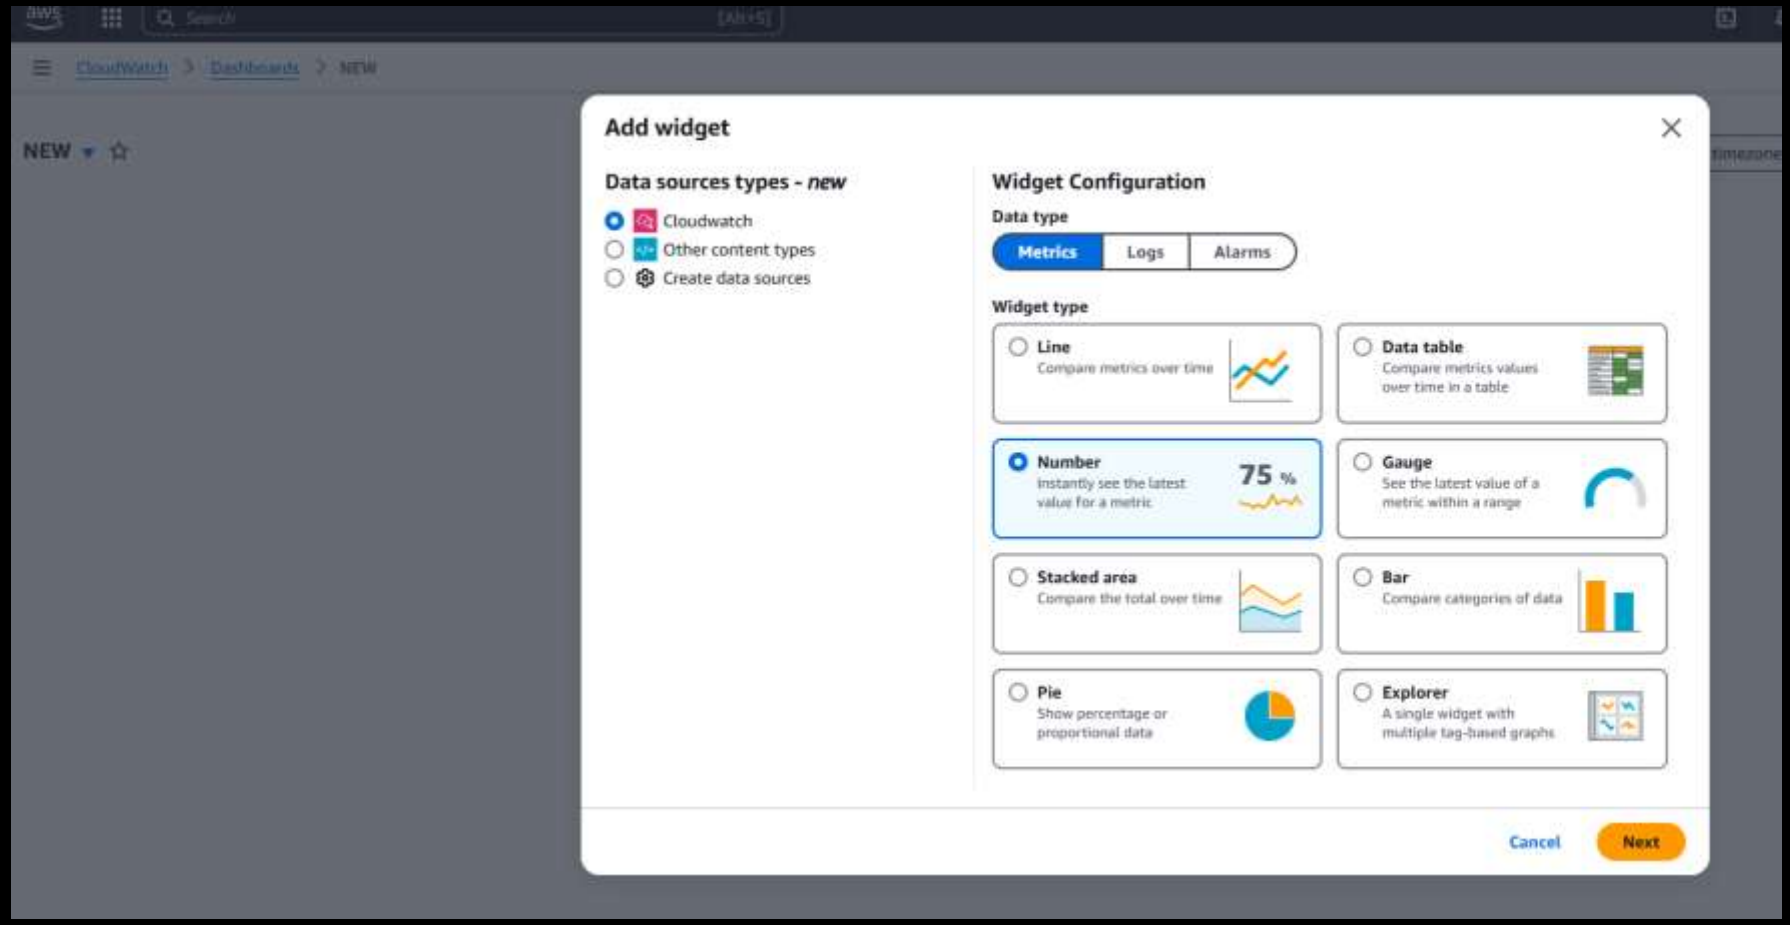

Step 13: Add name and Description and click on **Create alarm.**

Alarm is created

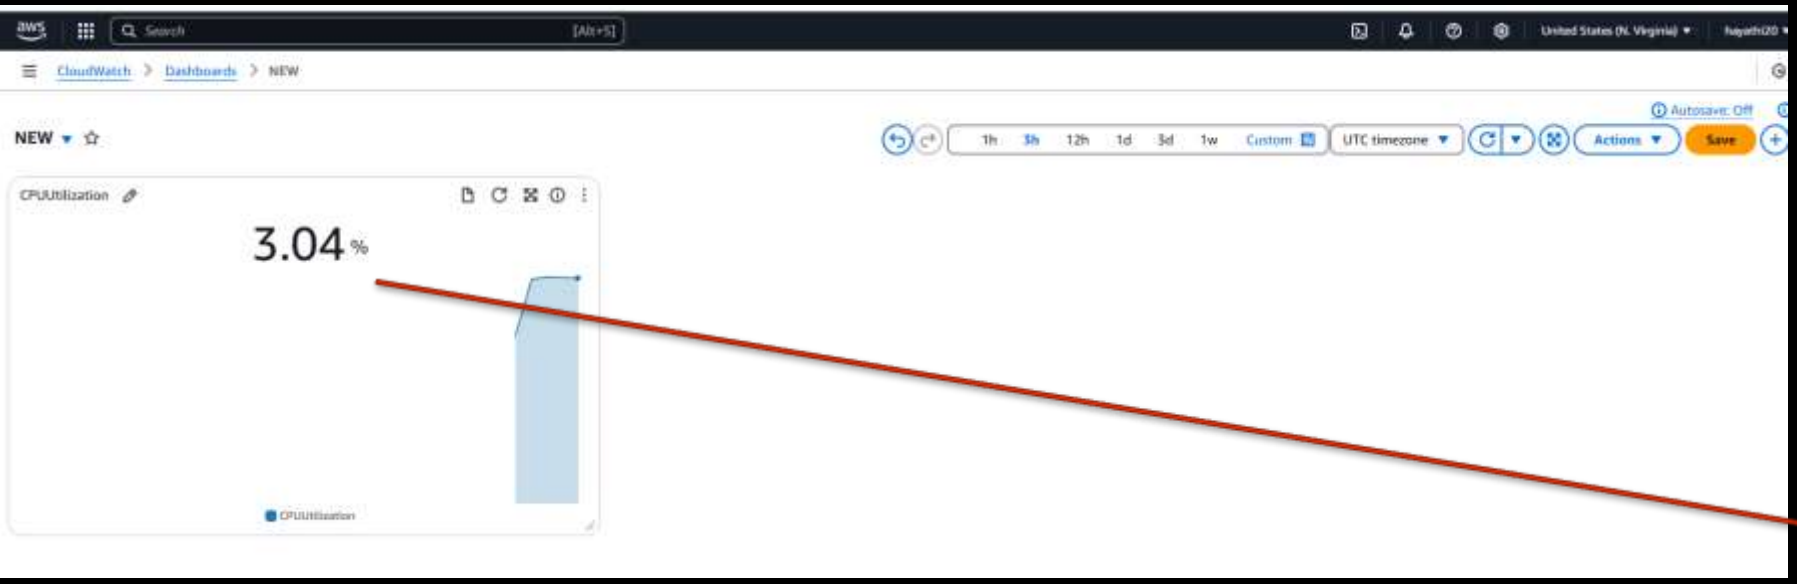

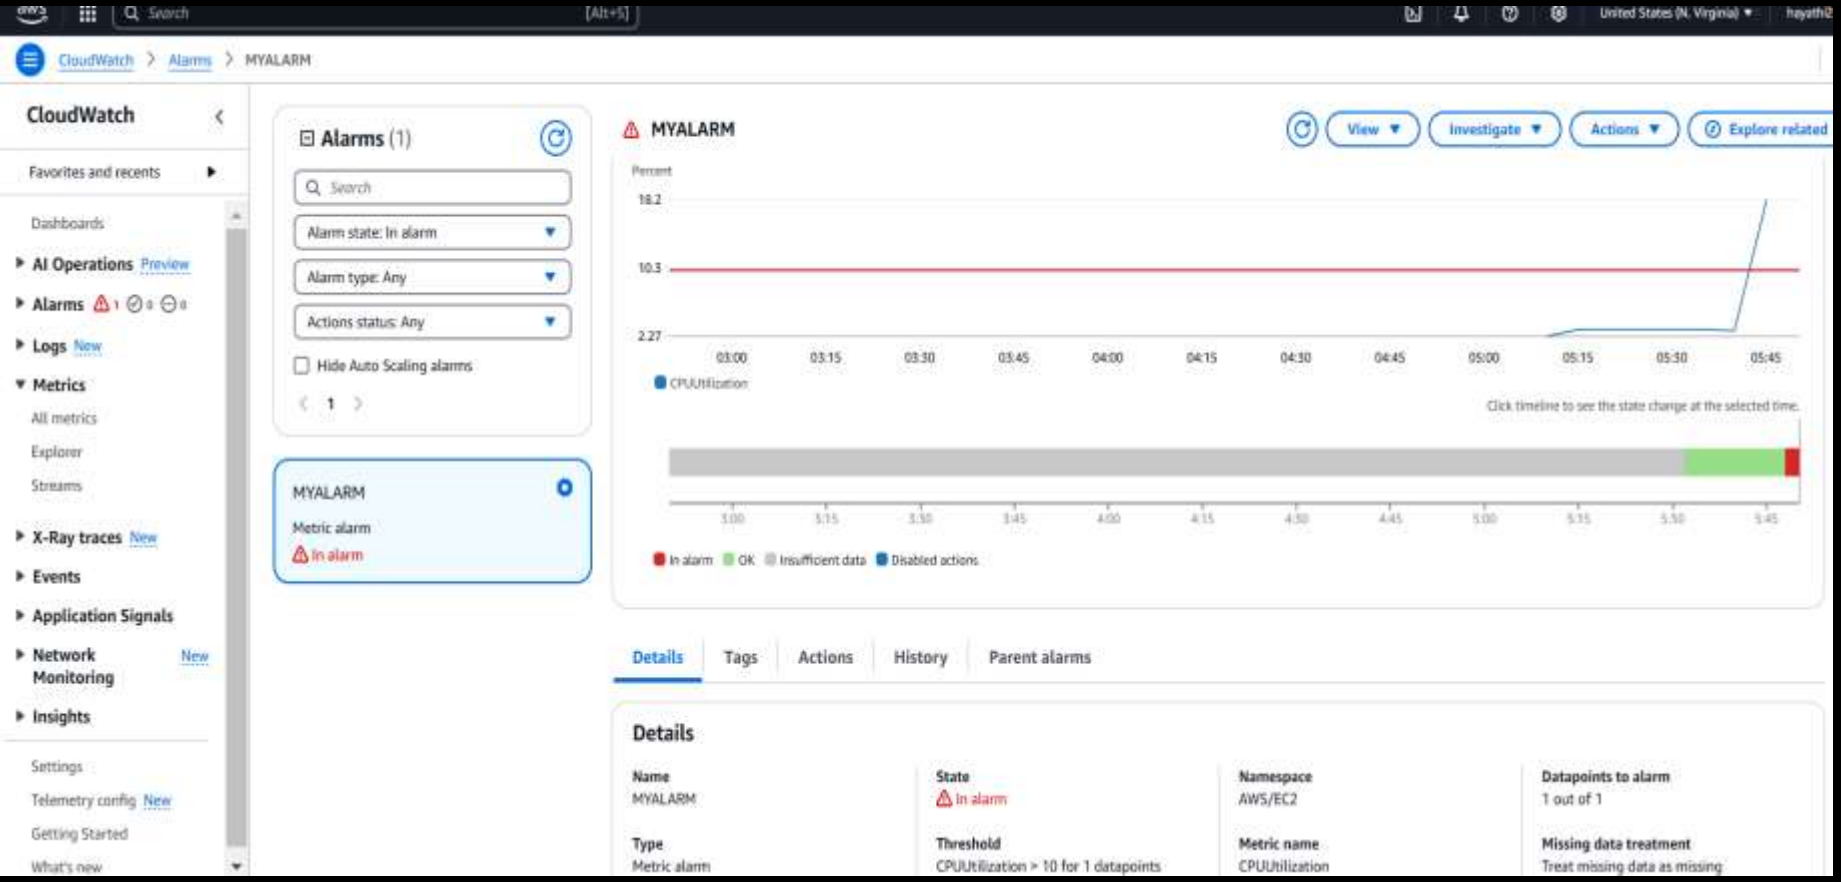

State is OK

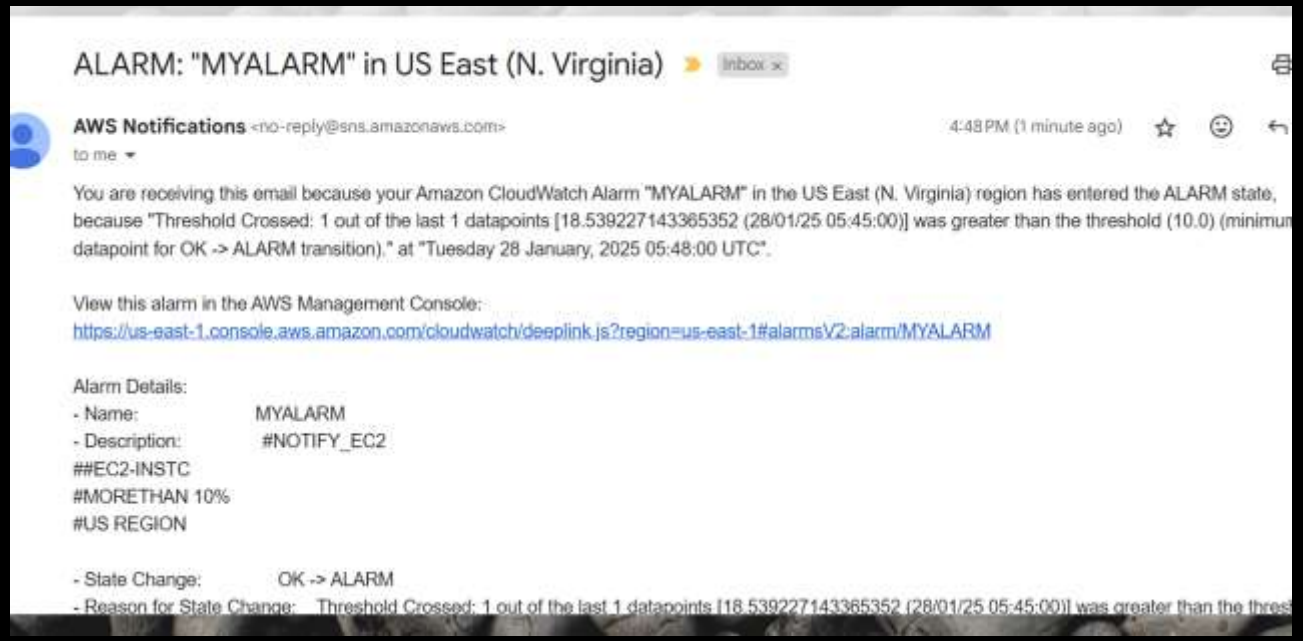

Click on dashboard -> Add widget -> Any type can be choosen -> Next

CPU utilization is shown in Numbers.

Now the CPU utilisation is < 10 and the alarm is triggered.

Received alarm notification in Email, SMS and SQS
